THE INSIDE STORY

*The most building friendly packages
available in the industry.*

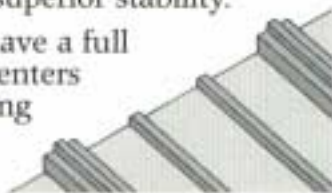

To find out how well a building is made, you've got to look under the roof.

When you examine a building built by M.P.B. Builders, Inc., you'll find extra heavy-duty kick braces, trusses, roof purlins, deep heels and corner braces.

The deep heel bracing built into the bottom chord of the truss permits a two-bolt connection resulting in superior stability.

Roofing and siding have a full 3/4" deep rib on 9" centers for added rain-carrying capacity.

Side lapping panels and screw fasteners make the sides and roof virtually leakproof.

M.P.B.'s buildings, whether commercial, agricultural or hobby, are designed for a lifetime of dependable use.

We have the experience, design staff and installation specialists to do the job right.

Give us a call and we'll bring your plans to life.
